Agile Software Development

with Shashi Shekhar

This handout provides a sample definition of "done" for a product backlog item, such as a user story.

Definition of Done	Verified (Y/N)
Feature fulfills desired functionality (business goal and business reason) as per the user story	
Code meets conditions of satisfaction as per the user story	
Integrated code compiles with zero errors and zero warnings	
All unit tests passed	
All behavior-driven tests passed	
Code checked in to the main branch and build was successful	
100-percent code coverage	
No function with cyclomatic complexity > 10	
Tests on devices and browsers listed in the project assumptions passed	
QA performed, and all issues except Class D (minor) bugs resolved and verified	
User story accepted by the product owner	
Any configuration or build changes documented	
Class documentation (compiled HTML) generated	
Peer code review performed	

Please note: The definition of done can be applied at various levels, such as each backlog item or an entire increment.
